1. Statistics Canada's population estimates, components of change and age groups are 2006 Census-based adjusted for net undercoverage.
2. Except for Canada, all projections are produced by the Ontario Ministry of Finance (Spring 2011). Projections for Canada are from Statistics Canada (based on 2006 Census).
3. Total dependency ratio is the ratio of the population aged 0-19 and 65+ to the population aged 20-64.
4. Total Fertility Rates and life expectancy estimates are for calendar year, and projections are for census year. Life expectancy estimates for years after 2005 represent three-year averages (e.g., 2006 reported life expectancy corresponds to the average recorded over 2005-2007).
5. Families and households are Census data.
6. In the "Components of Change" table, flows are for the 12-month period July 1 to June 30. Net international migration is calculated as the net balance of immigrants, net emigrants and net non-permanent residents (NPRs).

Note: All population figures are for July 1<sup>st</sup>.
