Highlights

Ontario's Real GDP Down in Q1

Ontario's real gross domestic product (GDP) declined 2.0% in the first quarter (January, February, March) of 2020, largely reflecting the impact of the COVID-19 pandemic during the last two weeks of the quarter.

- Nominal GDP decreased 1.5%, as compensation of employees declined 0.7% and the net operating surplus of corporations contracted by 4.9%.
- Economic production measured on an industry basis decreased 1.9%. Service sector output declined by 2.1%, while output in goods-producing industries decreased 1.2%.

Expenditure Details

Real GDP Contracts

Ontario's **real GDP** decreased by 2.0% in the first quarter of 2020, after edging up 0.1% in the fourth quarter of 2019. This was the first quarterly decline since the second quarter of 2011.

Household consumption spending was down 2.0%, the steepest decline since the first quarter of 1991. Consumer spending on durables declined 6.2%, led by a sharp drop in motor vehicle purchases. Spending on semi-durable goods (-9.0%) and services (-2.6%) also decreased with clothing stores, restaurants and travel services all impacted. Spending on non-durable goods rose 4.1% as consumer stockpiling, especially of food items, was prevalent.

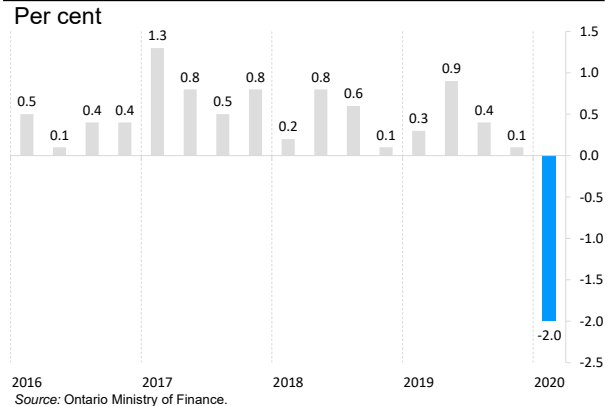

Total business investment edged down 0.2% in the first quarter, driven by **machinery and equipment** (-2.5%). This was partially offset by higher investment in **residential construction** (+0.1%), **non-residential structures** (+1.6%) and **intellectual property products** (+0.2%).

Spending at all three levels of **government** combined declined by 0.7%, following a 0.3% rise in the previous quarter.

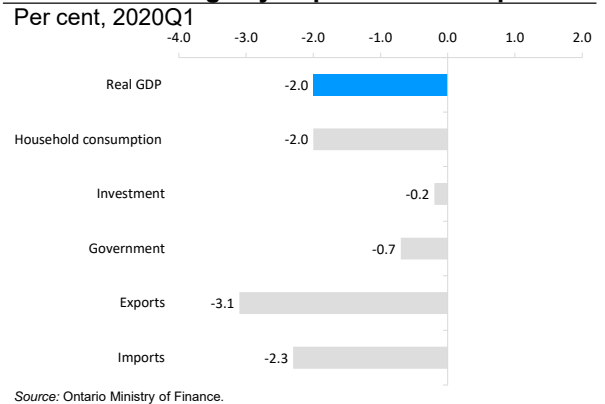

Exports (-3.1%) and **imports** (-2.3%) both declined in the first quarter largely reflecting rail blockades, plant shutdowns and lower demand as a result of COVID-19.

Supply chain disruptions resulted in businesses drawing down \$1.5 billion worth of **non-farm inventories**, following a \$4.2 billion accumulation in the fourth quarter.

Real Export and Import Growth

Income Details

Nominal GDP Lower

Ontario's **nominal GDP** declined 1.5%, the first quarterly decline since the fourth quarter of 2008.

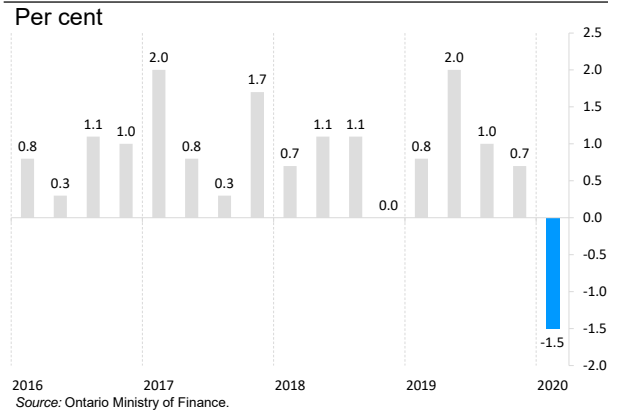

Compensation of employees, which includes both wages and salaries and supplementary labour income, decreased by 0.7%, after increasing 0.9% in the previous quarter.

Business sector profits, measured by the **net operating surplus of corporations**, decreased 4.9% in the first quarter of 2020, after increasing by 0.5% in the fourth quarter of 2019.

Net mixed income, which is comprised of farm, non-farm and rental income, increased 1.5%, after a gain of 1.9% in the previous quarter.

Household disposable income, which measures all sources of income and excludes personal income taxes paid and other transfers, increased 0.5%, following a 1.2% advance in the previous quarter.

Price Details

Economy-Wide Prices

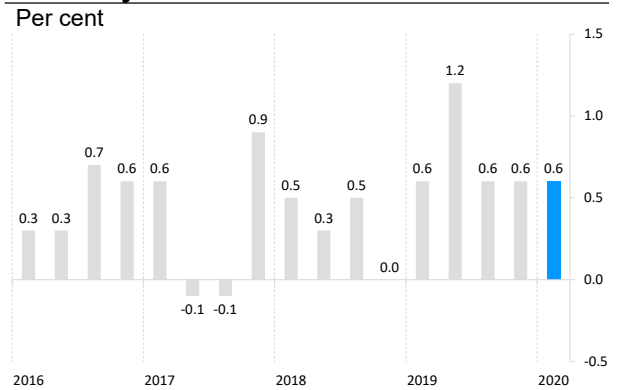

Economy-wide prices, as measured by the **implicit price index for GDP**, rose 0.6% in the first quarter of 2020, matching the rise in the previous two quarters.

Prices for **household consumption expenditures** edged up 0.1%, after rising 0.2% in the previous quarter. Prices for motor vehicles and clothing advanced, while prices for electricity, natural gas, and gasoline declined in the first quarter.

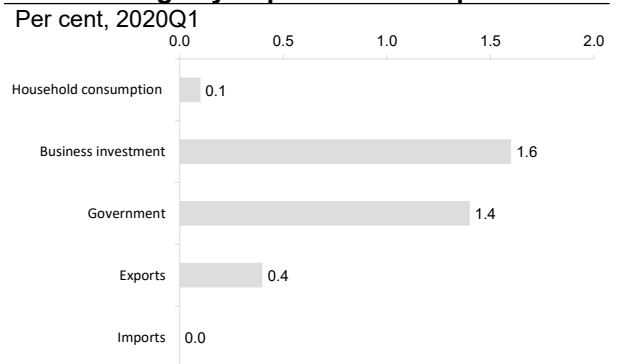

Business investment prices increased 1.6%, as prices in **residential construction** (+2.3%), **non-residential construction** (+0.4%) and **machinery and equipment** (+1.5%) all trended higher in the first quarter.

Export prices rose 0.4%, while **import prices** were flat in the first quarter of 2020. During this period, the Canadian dollar depreciated 1.8% against the U.S. dollar.

Industry Details

GDP Growth by Industry

Ontario **real GDP**, measured as value-added by industry, declined 1.9% in the first quarter of 2020, following an increase of 0.2% in the previous quarter. The decline was led by lower output in service-producing industries (-2.1%), while output in goods production (-1.2%) also decreased in the quarter.

Manufacturing output decreased 2.3% in the first quarter. This was led by lower output in transportation equipment (-12.2%), in part reflecting temporary shutdowns at some assembly plants due to COVID-19 lockdowns and rail disruptions early in the year. Declines were also recorded in plastic and rubber products (-7.8%), machinery (-4.9%) and textile, clothing and leather (-18.5%) manufacturing due to temporary plant shutdowns and global supply chain disruptions.

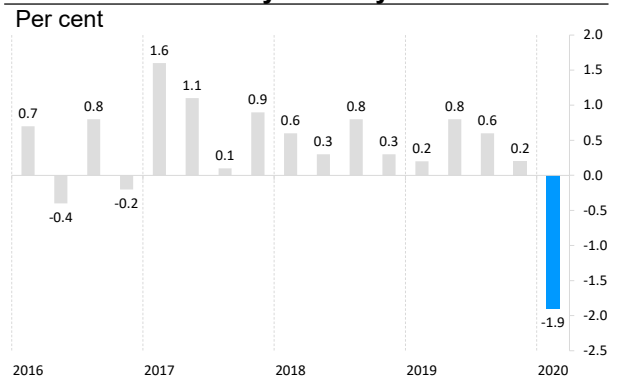

Construction output was 0.4% higher, as both non-residential structures and engineering (+0.6%) and residential construction (+0.1%) output rose in the quarter.

Primary industry output decreased 1.4%, with agriculture and forestry (-2.1%) and mining (-0.5%) output declining.

Utilities output edged up 0.1%, as an increase in electric power (+0.9%) was partially offset by a decline in natural gas, water and other utilities (-2.4%).

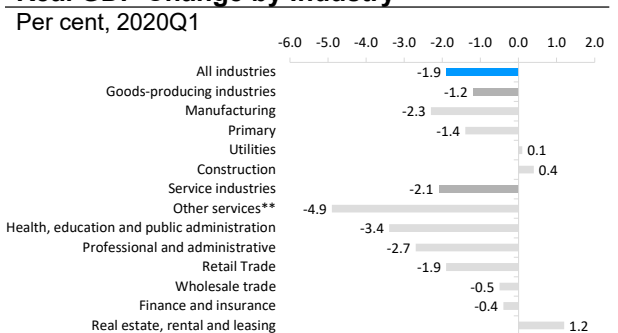

Lower output in **service-producing industries** was driven by educational services (-6.9%), professional and administrative services (-2.7%) and accommodation and food services (-12.4%).

Jurisdictional Comparisons

Ontario Growth in Context

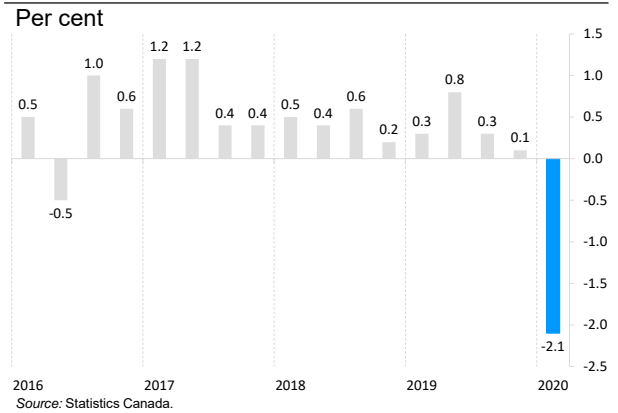

The outbreak and global spread of COVID-19 has negatively impacted the global and Canadian economies.

Canadian real GDP declined 2.1% in the first quarter of 2020, after edging up 0.1% in the fourth quarter of 2019. Household spending declined 2.3%, the steepest quarterly decrease on record. Lower investment in machinery and equipment (-3.5%) and exports (-3.0%) also contributed to the overall decline.

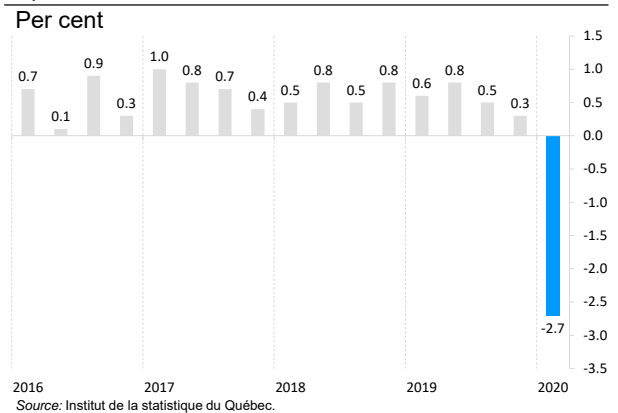

Quebec's real GDP declined 2.7% in the first quarter, driven by lower household spending (-2.9%) and exports (-3.1%). This follows a 0.3% increase in the fourth quarter of 2019.

In the **U.S.**, real GDP declined 1.3% in the first quarter, after rising 0.5% in the fourth quarter of 2019. Household consumption (-1.8%), exports (-2.3%), and machinery and equipment (-4.4%) all declined in the quarter.

Recent Economic Developments

Global Economic Developments

COVID-19 Impacts Global Economy

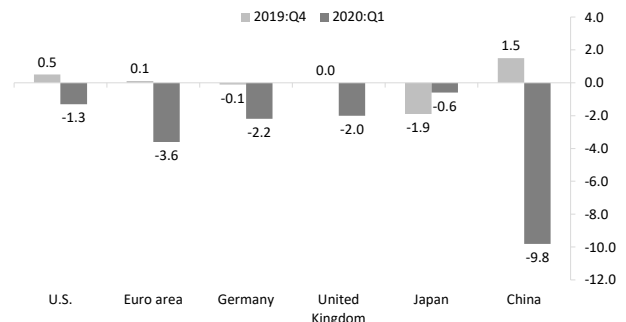

The COVID-19 pandemic triggered significant economic downturns across the world as people sheltered at home and businesses laid off workers. Real GDP in the **euro area** declined 3.6% in the first quarter of 2020, following 0.1% growth in the previous quarter. As countries implemented strict lockdown measures late in the quarter to contain the pandemic, real GDP in **Italy** and **France** both contracted 5.3%, while **Spain's GDP** declined 5.2%. **Germany's** GDP contracted 2.2% after a 0.1% decline in the fourth quarter. Real GDP in the **United Kingdom** declined by 2.0%.

Japan's real GDP declined 0.6% in the first quarter following a 1.9% decline in the previous quarter. This represents Japan's first recession since 2015. **China's** real GDP declined 9.8% as strict lockdown measures were imposed for much of the first quarter.

The **U.S. economy** contracted 1.3% in the first quarter of 2020, following a 0.5% gain in the previous quarter. The decline reflected the response to the spread of COVID-19 as many state governments issued stay-at-home orders in March. Lower personal consumption expenditure (-1.8%), non-residential investment (-1.6%) and exports (-2.3%) contributed to the decline. The overall decrease was partially offset by a third consecutive quarterly rise in residential investment, which increased 4.3%, and by government spending, which increased 0.3%. Imports declined 4.2%, helping to support GDP growth.

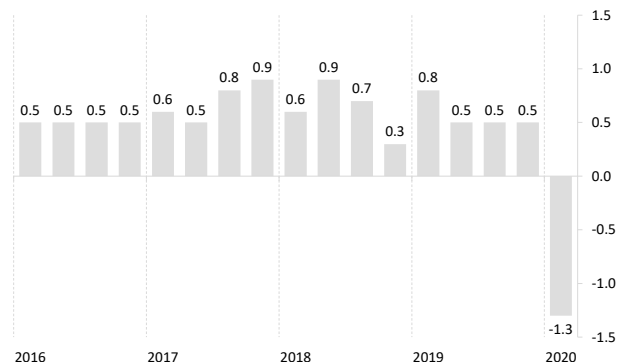

U.S. employment declined by a combined 22.2 million in March and April. Employment rose by 2.7 million in May followed by another 4.8 million increase in June. The unemployment rate declined by 3.6 percentage points from its peak in April to 11.1% in June, reflecting a gradual resumption of economic activity. However, the unemployment rate remains 7.6 percentage points higher and the employment level 14.7 million lower compared to February 2020.

Global Economic Developments

Markets Beginning To Recover

Economies have begun to gradually resume activity following pandemic-related lockdowns, but uncertainty remains heightened.

Demand for **oil** declined sharply in March and April as travel restrictions took hold while the supply of oil remained elevated, leading to an acute shortage of storage space and briefly sending oil prices into negative territory for the first time. The West Texas Intermediate oil price declined to -US\$37 per barrel in late April before recovering to around US\$38 per barrel by early June as the Organization of the Petroleum Exporting Countries and other major oil producers agreed to cut production.

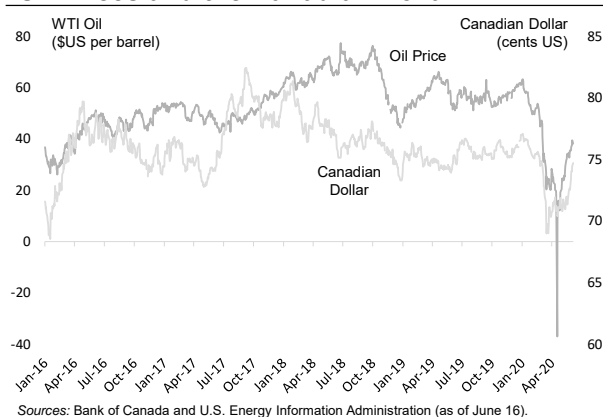

The **Canadian dollar** regained some strength, trading slightly above 73 cents U.S. in mid-June after weakening to below 70 cents U.S. in March.

Major stock indices declined sharply in the first quarter, with the U.S. S&P 500 (-34%) and Canada's S&P/TSX Composite (-37%) down in March from their respective February peak. Both indices have since recovered from their March lows but remain below their pre-pandemic highs in level terms.

Uncertainty has kept demand for safer assets high and, as a result, yields for **long-term government bonds** low. The Canadian 10-year government bond yield hovered around 0.5% in mid-June, after averaging 1.2% in the first quarter.

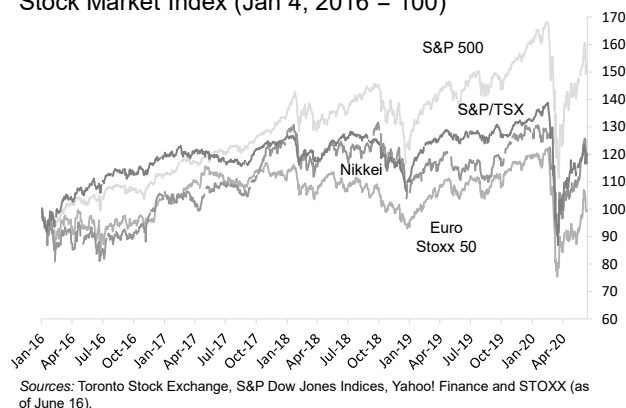

Major central banks have maintained interest rate cuts and brought in liquidity measures to support their economies. The **U.S. Federal Reserve** maintained the target range for its federal funds rate at 0 to 0.25% in June and committed to using its full range of tools to support the U.S. economy. The **Bank of England** maintained its bank rate at 0.1% in May, and the **European Central Bank** kept its key policy rate at -0.5% in June. The **Bank of Canada** also maintained its key policy interest rate at 0.25% in June.

Employment

Labour Market Overview

Ontario's **employment** declined by nearly 1.2 million jobs (-15.3%) between February and May 2020, reflecting the impact of the COVID-19 pandemic. In June, employment increased by 377,900 jobs (+5.9%).

Between February and May, both full-time (-12.5%) and part-time (-28.2%) positions posted significant declines. Both of these increased sharply in June with full-time positions up 4.0% and part-time positions up 16.2%.

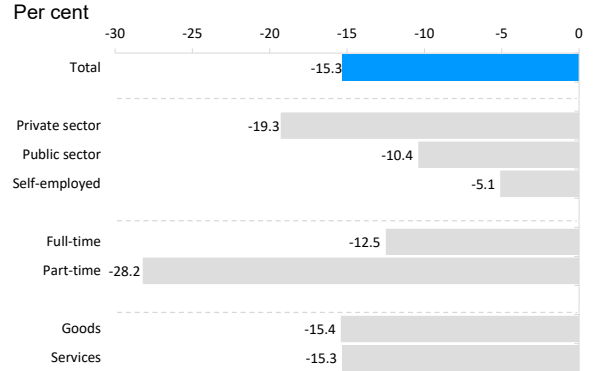

Most of the decline between February and May was concentrated in the private sector (-19.3%), while public sector (-10.4%) and self employment (-5.1%) also decreased. Most of the recovery in June was in private sector employment (+8.1%), while public sector (+4.0%) and self employment (+0.6%) also increased.

There were notable employment declines in both service-producing (-15.3%) and goods-producing (-15.4%) industries between February and May. There was a strong recovery in June for both services (+5.4%) and goods-producing (+8.0%) employment.

The **unemployment rate** rose sharply from February to May (+8.1 percentage points) reaching 13.6%, the highest unemployment rate on record. In June, the unemployment rate decreased to 12.2%.

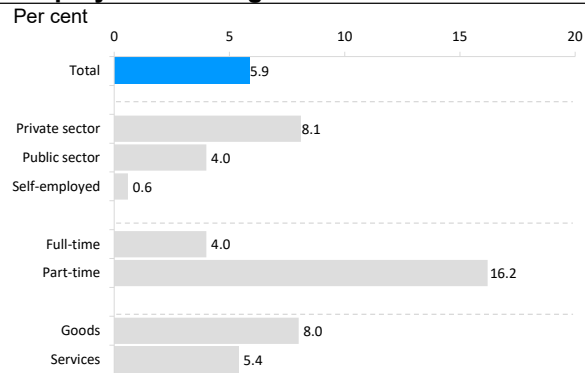

Note: More information on Ontario labour market performance can be found in the Quarterly Ontario Employment Report at: <https://www.ontario.ca/document/ontario-employment-reports>

Consumer and Business Activity

Retail and Wholesale Trade and Manufacturing Sales

The COVID-19 pandemic significantly impacted consumer and business activity late in March. Early in 2020, consumer and business activity was steady with retail sales and wholesale trade rising modestly.

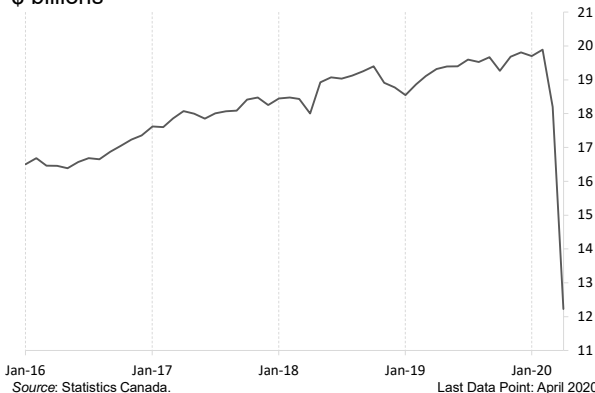

Following an increase of 1.0% in February, **retail sales** declined by 8.5% in March and a further 32.8% in April. The decline was led by lower sales at motor vehicle and parts dealers and clothing and accessories stores.

Wholesale trade decreased by 4.2% in March and 30.2% in April, following increases of 1.0% in February and 2.1% in January. Since February, the declines were led by lower sales of motor vehicles and parts (-89.1%) and building materials and supplies (-30.7%).

Following an increase of 3.2% in February, **manufacturing sales** declined by 14.4% in March and a further 37.1% in April. Since February, the decline was led by lower sales of transportation equipment (-92.4%).

Housing

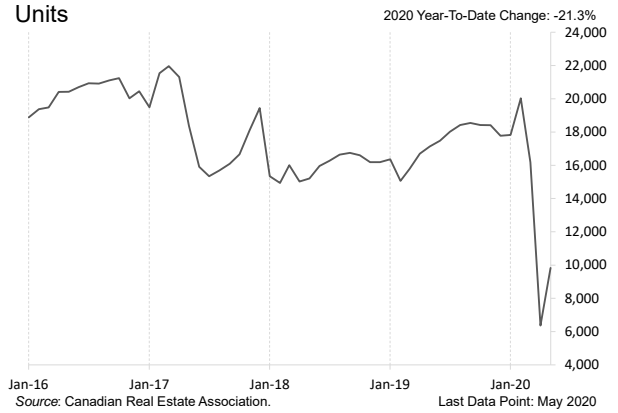

Housing Market Overview

The COVID-19 pandemic has negatively impacted Ontario's resale housing market. **Sales of existing homes** rose strongly in early 2020, before declining sharply in March and April, followed by a modest rebound in May. Overall, home resales were 21.3% lower over the first five months of 2020, compared to the first five months of 2019.

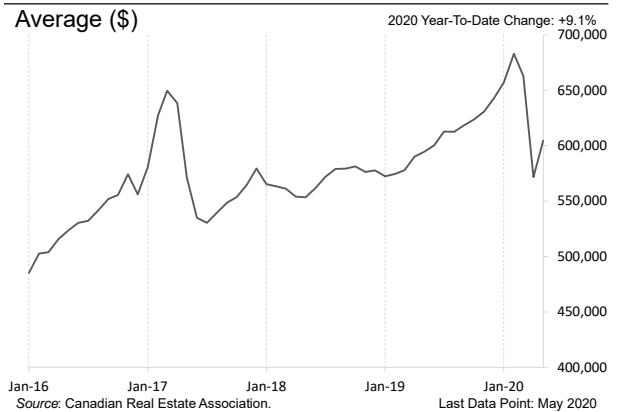

Ontario's **average home resale price** has trended upward since early 2019, through early 2020. The average home resale price declined in March and April, before rebounding in May. On a year-to-date basis, the average home resale price was 9.1% higher than the same period in 2019.

On a year-to-date basis, **housing starts** rose 12.6% in the first six months of 2020, compared to the same period in 2019. Both single-detached (+12.3%) and multiple-unit (+12.8%) starts rose over the period.

In Focus

Teleworking Trends During COVID-19

Governments across Canada have introduced a series of physical distancing measures to limit the spread of COVID-19, including orders closing or restricting businesses. This has resulted in a large number of Canadians teleworking or working remotely, many for the first time.

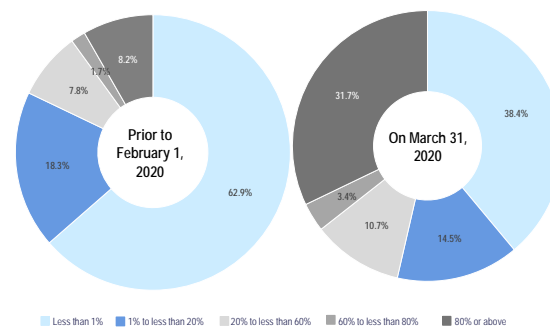

Since the start of the COVID-19 pandemic, the share of Ontario’s employers with 80% or more of their workforce teleworking or working remotely nearly quadrupled, increasing to 31.7% on March 31, 2020 from 8.2% prior to February 1, 2020¹.

Ontario outpaced other Canadian provinces and had the highest share of employers with at least 50% of their workforce teleworking or working remotely. Ontario’s share increased from 12.1% prior to February 1, 2020 to 38.3% on March 31, 2020 and remained above the national average.

In Canada, information and cultural industries (84.6%) had the greatest share of employers with at least half of their workforce teleworking or working remotely on March 31, 2020, while accommodation and food services had the lowest share (8.3%).

The top five industries with the highest share of employers with at least half of their workforce teleworking or working remotely made up 24.2% of total employment, while the bottom five industries with the smallest share made up 36.1% of total employment. These findings suggest that most workers in the top five industries with the greatest share of workers teleworking have jobs that allow them to perform their work from home, which is typically linked with higher levels of education². Meanwhile jobs with the lowest shares usually require face-to-face interactions or on location presence and have limited telework capacity.

Appendix

OEA Release Dates

The *Fiscal Sustainability, Transparency and Accountability Act, 2019* states that the quarterly Ontario Economic Accounts should be released within 45 days of the Statistics Canada release of the National Income and Expenditure Accounts.

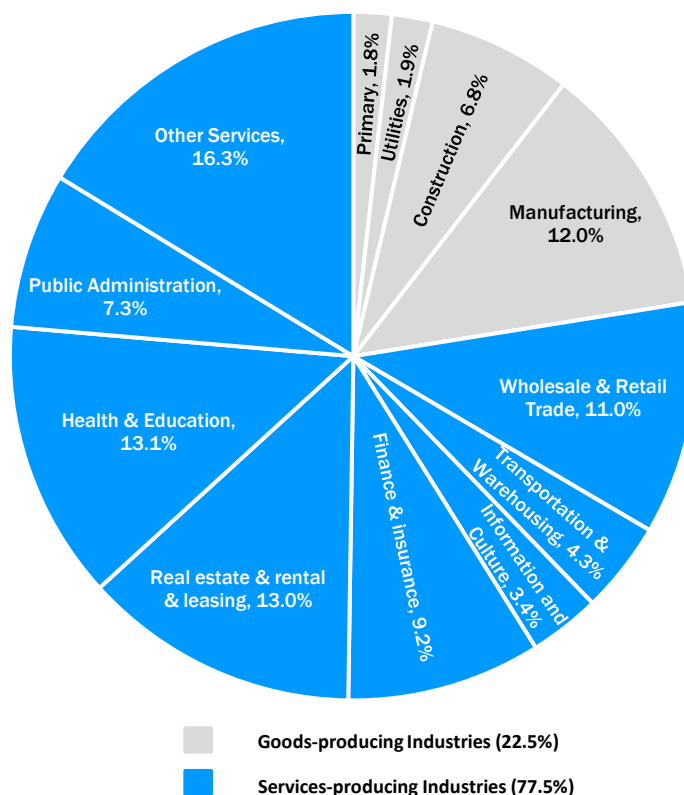

In compliance with the legislation, the OEA will be released according to the following schedule:

Reference Period	Expected Statistics Canada release of National Income and Expenditure Accounts	Corresponding deadline for the release of Ontario Economic Accounts
Second Quarter (April-June) 2020	August 28, 2020	By October 13, 2020
Third Quarter (July-September) 2020	December 1, 2020	By January 15, 2021
Fourth Quarter (October-December) 2020	March 2, 2021	By April 16, 2021

Appendix

Appendix

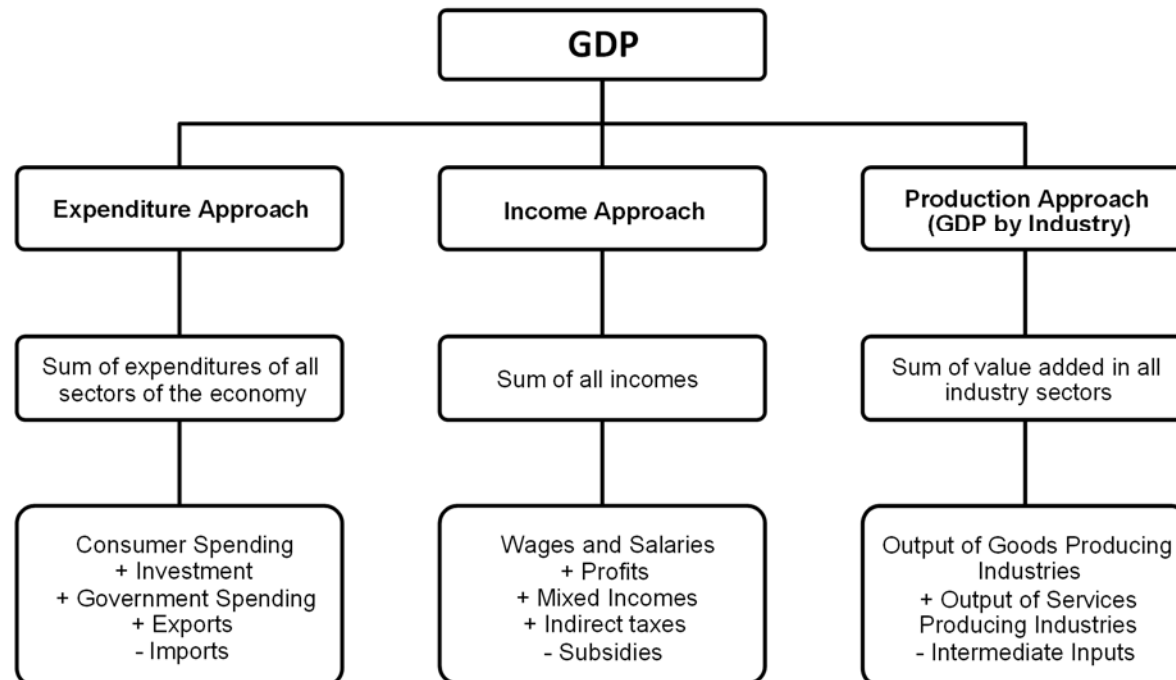

How GDP is Measured

The Ontario Economic Accounts provide measurements of GDP using three different methodologies, by expenditure, income and industry.

The **GDP by expenditure** approach defines GDP as the aggregate of all expenditures on final consumption, gross capital formation and net trade by consumers, governments and businesses that occur within Ontario's economy over a given time period. This measurement of GDP can also be defined as the sum of consumer spending, gross investment, government spending and net trade.

The **GDP by income** approach equates GDP to the total income earned through contributions to production within Ontario's economy by labour and capital over a given time period. That is, GDP is the sum of all wages and salaries paid to employees, the gross operating surplus of businesses, gross mixed income and indirect taxes less subsidies.

The **GDP by industry** approach measures GDP by calculating the total output of the goods and services producing industries within Ontario's economy and subtracting the cost of intermediate inputs used in final production. This approach can also be referred to as the value-added approach as it quantifies the additional value generated by industries through the production of final products within the economy.

For a full list of definitions used in the Ontario Economic Accounts, please see Statistics Canada's System of Macroeconomic Accounts Glossary at <https://www150.statcan.gc.ca/n1/pub/13-605-x/gloss/gloss-a-eng.htm>.
